

Motivations and Guidelines:

I am creating this Google Drive in an attempt to help achieve the following goals:

- Enable easy access to material used in the project including:
 - Data sets (updates and revisions)
 - Literature and resource sharing platforms
 - Collective reference sharing and citation gathering
- Create repositories for documents and programming scripts to preserve multi-edition merging (Overleaf and Github repositories might be advisable down the line)
- Support feedback, and communication channels. Hopefully, with the outcome of making both EASIER!

I have created the following folders and documents:

- Timeline-to include at least the following two documents:
 - Goals arranged by group
 - Goals arranged by intended date of completion
- Presentation/Paper-will most likely be used when these become more pressing topics of discussion
- Literature Review
 - Relevant & interesting papers
- Data & Scripts
 - Data updates (preferably zipped versions) if altered for future use
 - R & Linux scripts to be used for future compilation
- References
 - Preferably BibTeX formatting of any used resources
 - Short description of each reference is also preferred
 - Adding of resources is ALWAYS advised. All relevant references will be compiled into a single section after project has been completed.
